**636-202-9400**

1351 Jefferson Street, Suite 208, Washington, MO

Must have a positive lab (not a home test)

Mon-Fri (need to schedule)

### FOR KNOWN COVID-19 CASES (POSITIVE)

CDC recommends isolation away from others for 5 days from symptom onset, and then if symptoms have improved, or are gone, then the positive should wear a mask for the remaining 5 days when around others. Individuals with a fever should remain in isolation until the fever resolves.

### FOR CONTACTS TO A POSITIVE COVID-19 CASE

Close contact is within 6 feet for 15 minutes or more of a positive case during the 2 days prior to their symptoms, or at any time until their release day. The CDC has divided close contacts into 2 categories with their respective guidance:

**Mask and Monitor:**

If vaccinated within the past 6 months with a primary series of Moderna or Pfizer, or in the past 2 months with J&J, or vaccinated within the past 6 months with a booster – as long as no symptoms develop- please wear a mask when around others for 10 days and test on day 5 if possible.

**Stay Home and Then Mask:**

If you are un-vaccinated, or it has been more than 6 months since primary series of Moderna or Pfizer, over 2 months since J&J, or more than 6 months since a booster, please stay home for 5 days if possible, and wear a mask for 5 days after that. If you can't stay away from others, please wear a mask for 10 days, and test on day 5 if possible.

### TESTING FOR COVID-19 IS AVAILABLE AT MANY LOCATIONS INCLUDING:

- Washington County Ambulance District Headquarters
- Washington County Memorial Hospital and Clinics
- Great Mines Medical Center
- Walgreens
- CVS
